

Insert as an Additional Taxa For *Erythrina herbacea*.

Erythrina × *bidwillii* J. Lindley

Hybrid Coral Bean

- C This is a hybrid species between *E. herbacea* and *E. crista-galli* which is of garden origin; plants are intermediate in morphology between the parental species and tend to be subshrubs to medium size woody shrubs depending upon the environmental conditions; plants are useful in USDA zones 8 through 11.
- C This plant takes on the flowering tendencies of both parents with both axillary and terminal racemes; the individual red flowers are 20 to 30 long; plants are very showy in flower and they will return bloom more readily during the season than with *E. herbacea*.
